Preface xiii

STATPHYS 18 – Opening Address xviii

The Boltzmann Medal xxii

Contents xxviii

Conference committees xxxii

Macroscopic laws, microscopic dynamics, time's arrow and Boltzmann's entropy
J.L. Lebowitz 1

Spin glasses, complexity and all that
G. Parisi 28

Theory of phase ordering kinetics
A.J. Bray 41

Modern methods of analyzing Monte Carlo computer simulations
R.H. Swendsen 53

Scaling and phase transitions in random systems
M. Cieplak and J.R. Banavar 63

Critical behavior induced by quenched disorder
A.N. Berker 72

Chaotic systems: counting the number of periods
B.-l. Hao and F.-g. Xie 77

Ergodicity of classical billiard balls
D. Szász 86

Fluid interfaces as treated by density functional theory
R. Lovett and M. Baus 93

Clustering and relaxation in oil-continuous microemulsions
D. Bedeaux, G.J.M. Koper and J. Smeets 105

Statistical physics of flexible membranes
R. Lipowsky 114

Finite-size scaling for first-order phase transitions (rigorous results)
C. Borgs and R. Kotecký 128

Kinetics of ordering
S. Dattagupta 137

A cluster model of critical dynamics
Z. Alexandrowicz 154

Reptation models for electrophoresis
A. Kooiman and J.M.J. van Leeuwen 163

Localization and tunneling in periodically driven bistable systems
T. Dittrich, F. Großmann, P. Jung, B. Oelschlägel and P. Hänggi 173

Generic singularities in a driven diffusive system
R.K.P. Zia, K. Hwang, B. Schmittmann and K.-t. Leung 183

Wrinkling transition in polymerized membranes
D. Bensimon, M. Mutz and T. Gulik 190

Instabilities and melting in a two-dimensional magnetic dipolar system
J. Berger, R.M. Hornreich and M. Warner 199

Transport phenomena in ferrofluids
J.M. Rubí and M.C. Miguel 209

Analysis of the lattice Boltzmann treatment of hydrodynamics
G. McNamara and B. Alder 218

Fifty years of kinetic theory
E.G.D. Cohen 229

Lattice gas automata with self-organization
H.J. Bussemaker and M.H. Ernst 258

Metastability and nucleation for two-dimensional Ising systems
E. Scoppola 271

Spin dynamics of a Heisenberg $S = \frac{1}{2}$ antiferromagnetic chain
R.A. Cowley, D.A. Tennant, T.G. Perring, S.E. Nagler and A.M. Tsvelik 280

Multifractal fluctuations in the dynamics of disordered systems
S. Havlin, A. Bunde, E. Eisenberg, J. Lee, H.E. Roman, S. Schwarzer and H.E. Stanley 288

Dynamics of soap froth
H. Flyvbjerg 298

Evolution of two-dimensional cellular structures: The soap froth
J. Stavans 307

SOC and the Bean critical state
C. Tang 315

Computer simulations for polymer solutions
K. Kremer, B. Dünweg and M.S. Stevens 321

Kinetics and relaxation of end crosslinked polymer networks
G.S. Grest, K. Kremer and E.R. Duering 330

Phase transition of polymer mixtures under simple shear flow
T. Hashimoto, T. Takebe and K. Asakawa 338

Weak first-order phase transitions
S.A. Pikin 352

Physics of smectic membranes
P. Pieranski, L. Beliard, J.-Ph. Tournellec, X. Leoncini, C. Furtlehner, H. Dumoulin, E. Riou, B. Jouvin, J.-P. Fénerol, Ph. Palaric, J. Heuving, B. Cartier and I. Kraus 364

Partition function of a three-dimensional solvable model
V.V. Bazhanov and R.J. Baxter 390

New results for exactly solvable critical RSOS models and vertex models in two dimensions
A. Klümper and P.A. Pearce 397

Local porosity theory for electrical and hydrodynamical transport through porous media
R. Hilfer 406

Freezing of binary mixtures of hard-sphere colloids
P. Bartlett and P.N. Pusey 415

Two-dimensional gels
H. Rehage and A. Burger 424

Quantum Monte Carlo methods – recent developments
M. Suzuki 432

Nonequilibrium molecular dynamics: the first 25 years
W.G. Hoover 450

Renormalization theory and chaos exponents in random systems
M. Ney-Nifle and H.J. Hilhorst 462

Statistical mechanics of neural networks
A. Zippelius 471

Condensation phenomena in thermodynamically unstable systems
H.A. Posch, H. Narnhofer and W. Thirring 482

Statistical mechanics of systems far from equilibrium, as studied by molecular dynamics
D.J. Evans 494

Exactly solvable model for a genetically induced geographical distribution of a population
C. Tsallis 502

Intermittency in turbulence
D. Lohse and S. Grossmann 519

Phase separation in polymer solutions
B. Widom 532

Macroscopic systems in quantum mechanics
N.G. van Kampen 542

Statistical physics of machinery: forgotten middle-ground
R. Landauer 551

Entropy and information in processes of self-organization: uncertainty and predictability
W. Ebeling 563

List of contributors 576

Analytic subject index 577
